ABSTRACT

The primary purpose of our project is to elevate the revenue of the tourism industry in Pakistan. Our goal is to design a web application that would engage Service providers and customers of the tourism industry. Service providers can offer their services remotely while customers can avail them at the comfort of their couch. Our application will provide better information regarding site-seeing, food areas, hotels, and pictures to help people decide the spots according to their interests. Once they have decided where to go, our application can help them choose the travel mode, which place to stay, and which package to avail of according to their budgets and interests. This platform will facilitate tourists from around the globe, promote Tourism in Pakistan, and attract people towards the enchanting and worth seeing tourist spots in Pakistan by showing people the brighter side of Pakistan. Our project would help People easily explore Pakistan within their budgets and according to their interests.
